Ammo Rotational wormer

Palatable, broad spectrum benzimidazole (BZ) group anthelmintic with a wide safety margin

**COMPOSITION**

185 g/kg Oxfendazole

**ACTIONS**

AMMO Rotational Wormer Paste for Horses is a palatable, broad spectrum benzimidazole (BZ) group anthelmintic designed for administration orally by syringe. It has a wide safety margin for use in horses including foals, yearlings, stallions and pregnant mares. AMMO Rotational Wormer Paste for Horses contains oxfendazole, which interferes with the metabolic pathways of intestinal parasites and sterilises worm eggs within 24 hours of dosing, thus reducing contamination of pastures.

All horses should be included in a regular parasite control programme with particular attention being paid to mares, foals and yearlings. AMMO Rotational Wormer Paste for Horses is ideal as an alternative wormer in a rotational worming program. Consult your veterinarian for a control programme to meet your specific needs.

**INDICATIONS**

Treatment and control of:
Adult and immature forms of *Parascaris equorum*, *Oxyuris equi*, *Trichostrongylus axei*, *Strongylus* spp., and susceptible small strongyles and adult *Habronema microstoma* in horses.

AMMO Rotational Wormer Paste for Horses kills the tissue stages of *Strongylus edentatus* and aids in the control of the migrating stages of *Strongylus vulgaris* (59-88% activity) with corresponding reduction in arterial lesions. A reduction in the prevalence of associated colic could be expected. It sterilises worm eggs within 24 hours of dosing.

To control bots trichlorfon may be administered concurrently. It may be administered to sick, debilitated or pregnant animals provided normal care is taken in handling them.

**DOSAGE AND ADMINISTRATION**

Dose orally in accordance with bodyweight by turning ring to appropriate setting on barrel side of plunger.

**WARNINGS**

- Export Slaughter Interval (Horses): Do not use less than 28 DAYS before slaughter for human consumption.
- Poisons Schedule: S5
  Harmful if absorbed by skin contact or swallowed. Avoid contact with skin. Wash hands after use.

**PRESENTATION**

32.6 g adjustable dose paste syringe.

Stud Pack contains 50 syringes.

**STORAGE**

Store below 30˚C (Room Temperature). Protect from light.

**AVAILABILITY**

For General Sale (APVMA 65223)

**NOTES**

A year round worming prevention and treatment program varies with climatic and stocking conditions, but, in general terms all horses should be wormed every 6 - 8 weeks, commencing at approximately 6 weeks of age.

All horses newly introduced to a property should be wormed immediately on arrival, and kept away from regularly used paddocks or yards for several days in order to minimise environmental recontamination.

**ROTATION IS EASY**

Use AMMO (Red) Allwormer for one year and AMMO (Green) Rotational Wormer the next year. This combination offers your horse 24 months protection.*

* Note: During green rotational year a dosing with red AMMO is necessary on two occasions for bot and tapeworm control during the months of Autumn and Spring.
